

CAM Color Dispensing System

CAM Colormaster™ Dispensing System

Innovative Technology

The new CAM Colormaster™ System is a patent-pending technology that has been engineered to accurately measure RHEOCOLOR® L liquid coloring admixtures into ready-mixed decorative concrete and precast architectural concrete products.

The CAM Colormaster System provides a simplified process for coloring concrete with advanced batching solutions that are flexible, accurate, and economical. This state-of-the-art liquid coloring admixture measuring system enhances concrete production, reduces waste and improves decorative concrete quality.

Features

- Requires 50% less plant space
- Uses standard electrical power
- Automated liquid color admixture dosing
- Accurate measurement of coloring admixtures
- Requires less rinse water
- Easy to use color batching software
- Wireless connection capability
- Monitors real time local liquid color inventory
- Optional web based inventory management

Benefits

- More economical liquid color system
- Safer equipment to install and maintain
- Enhanced decorative concrete batching productivity
- Improved decorative concrete quality
- Reduced waste and labor costs
-
